2000/3200

## FEATURES

### EXCELLENT RELIABILITY

Extensive protection circuitry results in these amplifiers has outstanding audio performance and reliability.

### DUAL MONORAL POWER SUPPLY

Each separated power source helps to produce perfect sound on its own output channel, even in the unlikely event of the other one failing.

### VOLTAGE STEP CIRCUITRY TO POWER OUTPUT STAGE

P2000: 2 Step circuit, P3200: 3 Step circuit.  
Intelligent and high efficiency voltage stepping circuitry that is added to the power output stage lowers the AC current consumption and improves thermal performance.

### VARIOUS PROTECTION CIRCUITS

Full short circuit, open circuit, thermal muting, ultrasonic and RF protection. Turn on/off muting, DC load fault relay with internal fault fuses.

### COMPREHENSIVE LED STATUS ARRAYS

Front panel LED indication showing the operating status of power, level, clip limiter and temperature protection.

### PARALLELED INPUT CHANNELS

The MODE switch situated on the rear panel allows several amplifier input channels to be wired in parallel.

### MODE SELECT SWITCH

The MODE switch situated on the rear panel allows the unit to be used for stereo sound, bridged mono or for paralleling the input channels of several amplifiers.

### FAN COOLING

The amplifier is cooled using a continuously variable speed fan. Variable speed also gives rise to quiet operation. Air flow is from front-to-rear.

### INPUT CONNECTORS

Balanced combination jack and balanced XLR plug.

### OUTPUT CONNECTORS

5 Way binding post and speakon jack.
